

Benefits

Saladebuffetten are composed with up to 19 species of grasses, clovers and herbs. **Deep rooting plants** in Pure Graze Saladebuffetten will improve **drought resistancy** and will increase the **organic matter** in the soil.

Because of this the **water carrying capacity** of the soil will improve. Our mixtures have a **long growing season**; they start early in spring and will continue to grow well into fall. **They are not prone to a summer-dip** in production as opposed to monoculture grasses. This provides you with a long term solution for increasing temperatures and drought in summer.

Because of the **rich** variety in plants the complexity and vitality of soil microbes will improve. The plants in our mixture are carfully selected on production, vitamin- and mineral contents in order to allow you to let your cattle graze happily and healthy. The medicinal benefits range from increasing appetite, combatting and preventing internal parasites to cleansing the internal organs such as the liver, kidneys and blood. All this combined has a favorable effect on your cows mood!

For you as a farmer the benefits will show in your accounting; **saving money on expenses** such as fertilizr, powerfeed and vetenary costs.

How to use

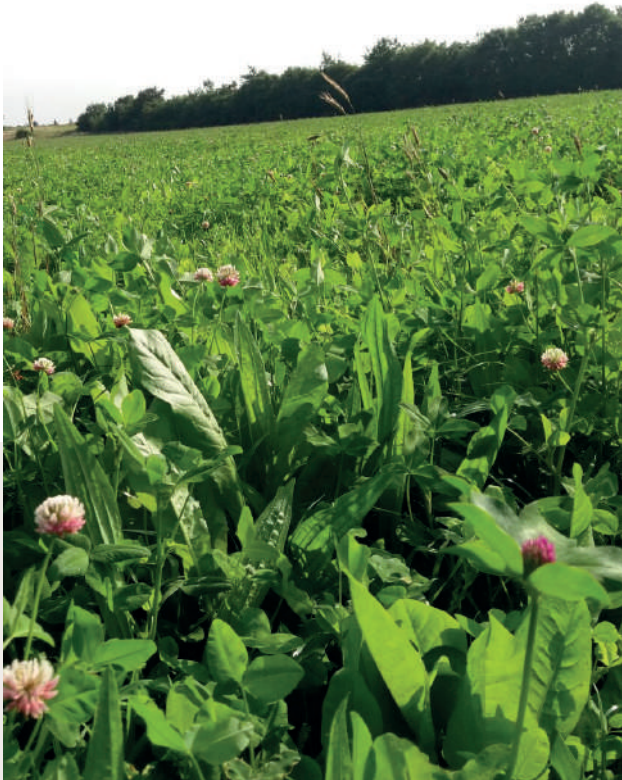

Saladebuffetten will yield higher without usage of fertilizer and pesticides. Usage of fertilizer and pesticides are not recommended, this way the variety in plants will disappear. In order to keep the wide variety of plants we reccomend to use Saladebuffet Seed-through every 3 years.

All of our Saladebuffetten will increase the biodiversity in your leys, such as: butterflies, insects and birds. Because of this the usage of Saladebuffetten are a good first step towards Nature-inclusive agriculture.

Production

Because of the carefully selected types of plants Pure Graze Saladebuffetten will yield higher than traditional mixtures. Saladebuffetten have a 31% to 47% higher yield in comparison with English Ryegrass with fertilizer.

Our product range

Our Saladebuffetten are suited for clay, peat and sandy soils. The compositions and sowing advice are carefully tuned to each soil type. We also have a Bio variant for sale. All mixtures are suiten for mowing as well as grazing.
